8-month-old gets bilateral N7 cochlear implant at Apollo-Delhi

— December 27, 2018

Dr. Ameet Kishore with the baby patient who received bilateral N7 cochlear implant

BS RAWAT

NEW DELHI: An 8-month-old baby is one of the youngest children in India to receive bilateral simultaneous cochlear implant using the N7 device and certainly one of the youngest in Apollo's bilateral cochlear implant programme.

A resident of Punjabi Bagh, New Delhi, the baby was diagnosed at birth with severe hearing loss in both his ears. His parents bought him to Indraprastha Apollo Hospitals, New Delhi, in an effort to find a treatment to restore his hearing.

In Apollo Hospital, the baby was initially fitted with hearing aids. After that the doctors, with the consent of parents, decided to go ahead with the surgery for N7 device.

The surgery went well without any complication. Post the surgery, N7 devices have been switched on at SpHear Clinic where the child is also receiving the much needed hearing and speech therapy.

N7 devices, the most recent cochlear implants, have a better chip and connectivity with digital units. The improvement in the quality of hardware and software further enhances the quality of sound that the patient gets, making it extremely good and clear.

Dr. (Prof) Ameet Kishore, Senior Consultant, ENT & Cochlear Implant Surgeon in the Hospital, said, "The implant requires extensive surgical expertise and efficiency to safely handle a small baby, which is why many people would hesitate to do this surgery on such a little baby."

Dr Kishore claimed, "With our experience of close to 1000 cochlear implants, this was not a concern as we have operated on many small babies safely and efficiently."
